These are results for python 3.
Search instead for pyhton3?
It looks like you're asking about Python 3.
Here's a quick guide to get you started:
1 Download & Install Python 3
Official site: https://www.python.org/downloads/
Choose the latest stable version (e.g., Python 3.12+).
During installation on Windows:
Check "Add Python to PATH" before clicking Install Now.
On macOS: Python 3 is often preinstalled, but you can update via the official installer or brew install python.
On Linux: Use your package manager, e.g.:

New repository
Relevance

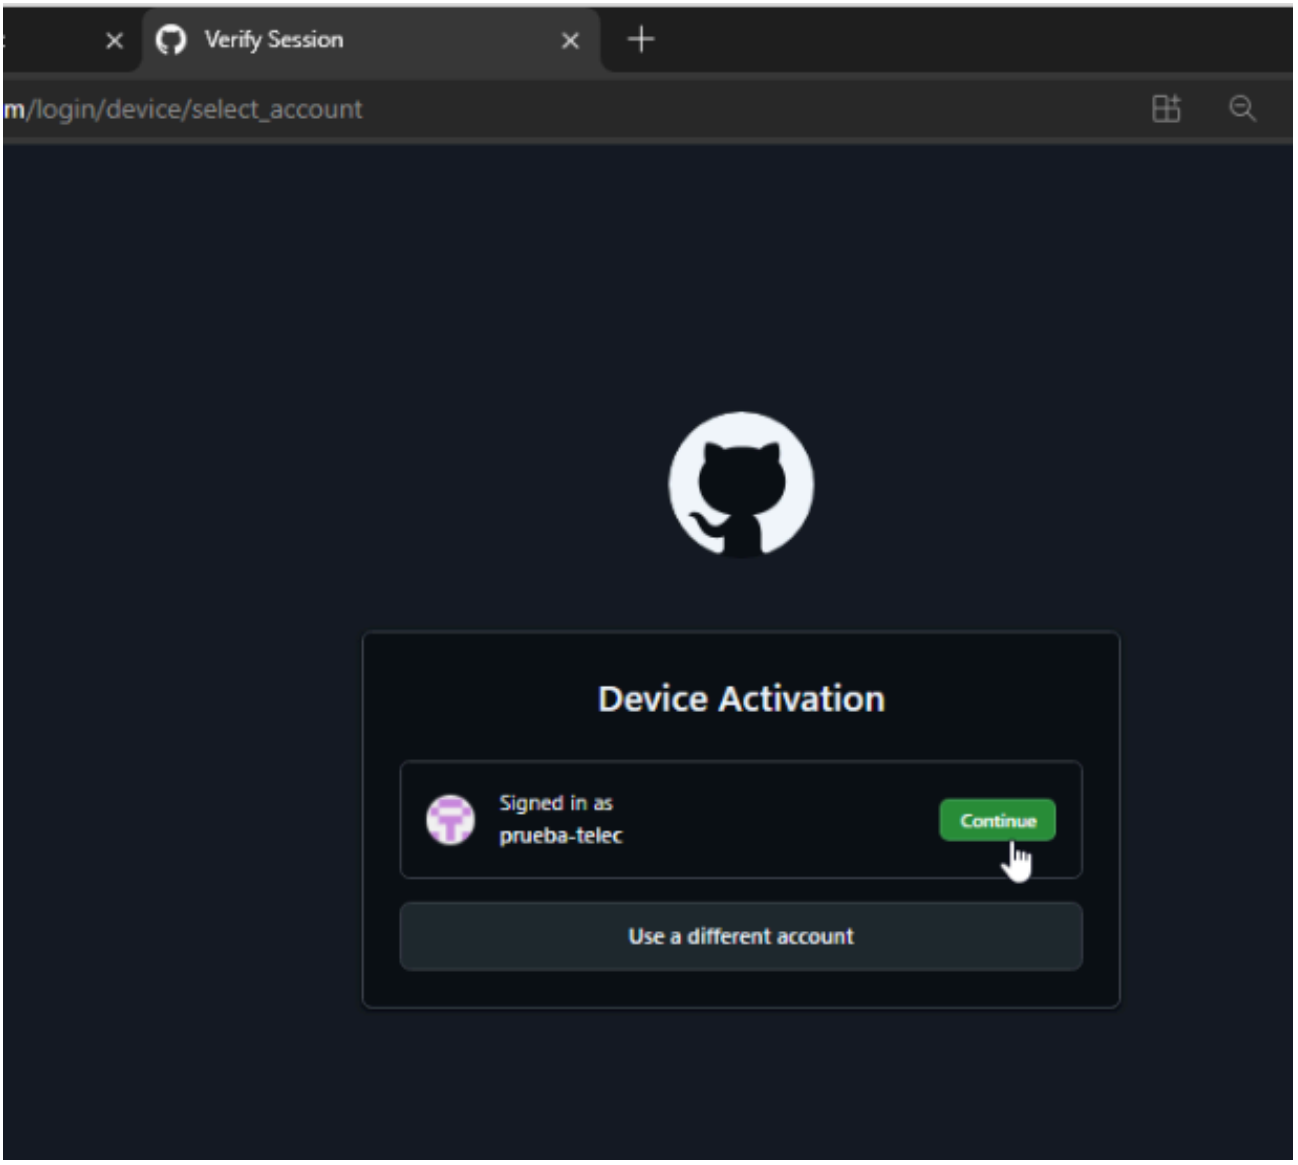

Create a new repository
Repositories contain a project's files and version history. Have a project elsewhere? Import a repository.
Required fields are marked with an asterisk (*).
1
General
Owner *
Repository name *
prueba-telec
/
prueba-test
prueba-test is available.
Great repository names are short and memorable. How about special-journey?
Description
0 / 350 characters
2
Configuration
Choose visibility *
Choose who can see and commit to this repository
Public
Add README
READMEs can be used as longer descriptions. About READMEs
Off
Add .gitignore
.gitignore tells git which files not to track. About ignoring files
No .gitignore
Add license
Licenses explain how others can use your code. About licenses
No license
Create repository

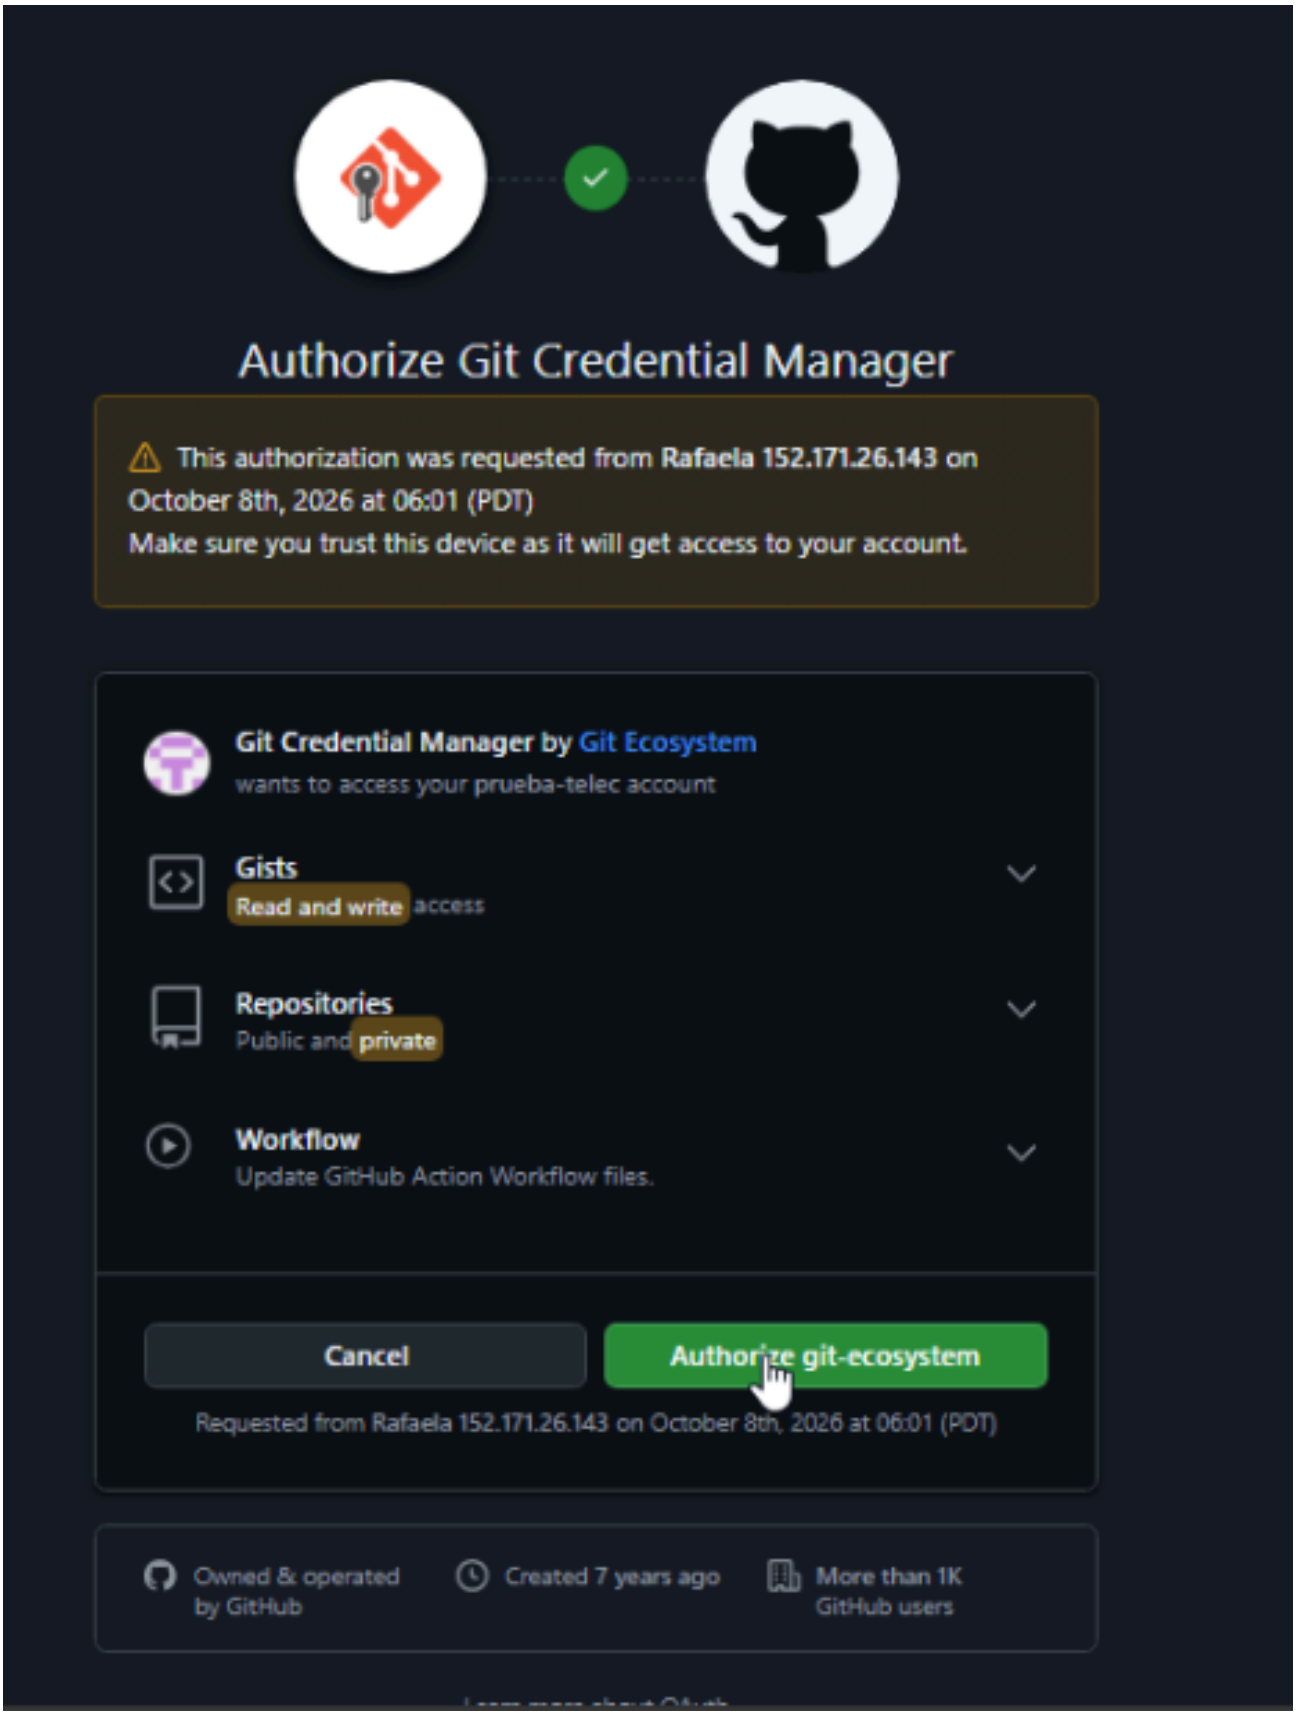

Pegamos lo que nos indica la pagina para crear el respositorio. Luego vincularemos nuestra cuenta con nuestro Git.
Un error nos soliticitara información sobre nosotros, como nuestro correo y nuestro nombre de usuario, lo ingresamos siguiendo la sintaxis del ejemplo:

UCRT64:/c/Users/Docker/Desktop/nueva-carpeta
Omit --global to set the identity only in this repository.
fatal: unable to auto-detect email address (got 'Docker@DOCKERW-GD6RHBR.(none)')
error: src refspec main does not match any
error: failed to push some refs to 'https://github.com/prueba-telec/prueba-test.git'
Docker@DOCKERW-GD6RHBR UCRT64 ~/Desktop/nueva-carpeta (main)
$ git config --global user.email "prueba_telec@proton.me"
